

Campus Resource Navigator

GROUP 6

**ADAM POLAK, CONNOR LEBERG,
JACK HARMER, LOGAN LAPIERRE,
THOMAS DANG, TRISTAN JARVEY**

The CRN Project

- **Problem:** UWM's campus resources and event information are spread out among various websites.
- **Campus Resource Navigator (CRN):** centralized platform for finding campus services and events
- Helps students **quickly discover and access resources** across campus
- Designed to improve **awareness, accessibility, and engagement**
- Supports both **students (users)** and **staff (content management)**

Functionality Overview

- Search and explore campus resources/events via **directory and interactive map**
- View and plan upcoming **courses**
- View detailed info and **navigate** to **campus locations** in real time
- Leave **ratings and feedback**

Technologies Used

Technology	Used On	Reason Used
GitHub	Version Control	Simple code and branch management. Prior team familiarity.
TypeScript	CRN App & Backend	Adds static typing to reduce bugs, improve code maintainability, and make collaboration easier on a larger team
React Native & Expo	CRN App	Fast cross-platform development (iOS + Android) with a single codebase; Expo simplifies setup, testing, and access to device features
Google Maps API		Provides reliable location and navigation features using the native Android/iOS performance.
Auth0		Provides high quality login security and session management.
PostgreSQL & Neon DB	Backend	Relational database with strong support for structured data, queries, and scalability for user and resource data.
Deno & Deno Deploy		Modern runtime with built-in security, TypeScript support, and simple dependency management.
Ruby on Rails & Render	Admin Dashboard	Familiarity; easy to quickly spin up an admin dashboard separated from the primary app.
Omni-Auth		Allows our Admin Dashboard to use the same secure Auth0 login features as our primary app.

Individual Contributions

Team Members	Contributions
Jack Harmer	Team Lead, Admin dashboard, Deployment, Full Stack development
Adam Joseph Polak	CRUD database functionality, Admin validation, Backend endpoints
Connor John Leberg	Frontend development, Map filtering, UI/branding improvements
Logan Lapierre	Manual Testing, Event/data scripting, CI/CD support
Thomas K Dang	Auth0 login, database work
Tristan Jarvey	Map location fixes, Multi-field search, Location fallback

Incomplete Tasks

- Expand testing coverage and improve automated testing solutions
- Continue refining CI/CD and deployment
- Improve backend/database scalability beyond free-tier limitations
- Restore and improve web application functionality
- Conduct real-world student testing and feedback collection
- Explore future collaboration/integration opportunities with UWM systems
